

SIGNS

Sign systems and type plates

Whether we are talking construction plates, type plates or advertising signs, orientation boards or displays, we make signage for both indoor and outdoor use. Signs may be implemented using screen printing and direct printing of plates, but also by the use of adhesive high-performance membranes or digitally printed membranes.

STICKERS

Self-adhesive labelling

We make advertising and notification stickers, inspection badges and labels as well as doming stickers using both screen and digital printing methods. For this purpose, we use self-adhesive membranes designed to meet the requirements of the customer. Starting with the creation of the design and moving through to finishing, we offer all stages of production from a single source.

PRINT FINISHING

Effective and creative printed products

With unique optical, haptic, scented and interactive effect and special paints, we can effectively promote every advertising message. Brochures, flyers, book covers and many other print media can be effectively finished using screen printing.

FOLDERS, DIRECTORIES, PACKAGING

Effective presentation

Whether for organisation, presentation or exhibition: Folders, directories and packaging are universal aids in many areas. When it comes to design, we are able to implement both common and more unusual formats. The products can also be printed and finished.

CHIP CARDS

Individually printed and coded

We are able to individually print and code simple plastic cards as well as no-contact and contact chip cards and cards with magnetic strips. Whether you choose to personalise with a photograph or number sequentially, we will implement your design precisely.
